1 C Sort Out The

Moving on with this article on Sorting Algorithms In C, Merge Sort. Merge Sort is one of the best examples of Divide & Conquer algorithm. In Merge sort, we divide the array recursively in two halves, until each sub-array contains a single element, and then we merge the sub-array in a way that it results into a sorted array. merge() function merges two sorted sub-arrays into one, wherein it assumes that array[l .. n] and arr[n+1 .. r] are sorted.

---

### Sorting Algorithms In C | C Program For Sorting | Edureka

The process of Sorting can be explained as a technique of rearranging the elements in any particular order, which can be set ready for further processing by the program logic. In C programming language, there are multiple sorting algorithms available, which can be incorporated inside the code. The various types of sorting methods possible in the C language are Bubble sort, Selection sort, Quick sort, Merge sort, Heap sort and Insertion sort.

---

### Sorting in C | Learn 6 Amazing Types of Sorting In C Program

sort is a generic function in the C++ Standard Library for doing comparison sorting. The function originated in the Standard Template Library (STL). The specific sorting algorithm is not mandated by the language standard and may vary across implementations, but the worst-case asymptotic complexity of the function is specified: a call to sort must perform  $O(N \log N)$  comparisons when applied to a range of  $N$  elements.

### sort (C++) - Wikipedia

Here is the simplest way to do it using qsort library. 

```
typedef struct { int key; double value; } the_record; int compare_function(const void *a,const void *b) { the_record *x = (the_record *) a; the_record *y = (the_record *) b; return x->key - y->key; } share. Share a link to this answer. Copy link.
```

By default Excel will sort by row, and will only sort by column where `by_col` is TRUE. When `by_col` is FALSE or missing Excel will sort by row. The SORT function is provided to sort data in an array. If you want to sort data in the grid, it's better to use the SORTBY function, as it is more flexible. SORTBY will respect column additions/deletions, because it references a range, where SORT references a column index number.
