Terry Eagleton explains that freedom, for Marx, entailed release from commercial labour, "a kind of creative superabundance over what is materially essential". Eagleton outlines the relationship between production, labour and ownership which lie at the core of Marx's thinking. Marx's utopia was a place in which labour is increasingly automated, emancipating the wealth of sensuous individual development so that "savouring a peach [is an aspect] of our self-actualisation as much as building dams".

Very few polymer mechanics problems are solved with only pen and paper today, and

virtually all academic research and industrial work relies heavily on finite element simulations and specialized computer software. Introducing and demonstrating the utility of computational tools and simulations, *Mechanics of Solid Polymers* provides a modern view of how solid polymers behave, how they can be experimentally characterized, and how to predict their behavior in different load environments. Reflecting the significant progress made in the understanding of polymer behaviour over the last two decades, this book will discuss recent developments and compare them to classical theories. The book shows how best to make use of commercially available finite element software to solve polymer mechanics problems, introducing readers to the current state of the art in predicting failure using a combination of experiment and computational techniques. Case studies and example Matlab code are also included. As industry and academia are increasingly reliant on advanced computational mechanics software to implement sophisticated constitutive models – and authoritative information is hard to find in one place - this book provides engineers with what they need to know to make best use of the technology available. Helps professionals deploy the latest experimental polymer testing methods to assess suitability for applications. Discusses material models for different polymer types. Shows how to best make use of available finite element software to model polymer behaviour, and includes case studies and example code to help engineers and researchers apply it to their work.

Eve, along with her sister Zoey, has an uncanny knack for helping people who frequent the Pike bakery at Pike Place Market in Seattle to find love. Her meddling is a thing of legends when it comes to matchmaking. But for Eve, it is a spectator sport as she has never really pursued a romantic relationship of her own. Love was for other people, and she basked in the results of watching people find their happily ever afters. Imagine her surprise when serendipity came knocking and she found herself falling head over heels. Her family has been dying of curiosity for months to find out who has Eve sneaking off to talk to in the middle of movies, or has her turning down events because she "has a date." Her secret has them all frantically trying to discover who has stolen the red headed dynamo's heart. Eve promises everyone that her certain someone will be attending their annual family Thanksgiving celebration... but first, she has to pick up a family friend from London at the airport. (The Pike series is set in the same world as *Music of the Soul* and *London Harmony*, and can be read as a standalone book.)

Shruti, a software engineer has a wish to be truly loved by someone. In her journey, she has two companions - Meera and her talking rational mind. Her idea of love and respect guides her to take some strong decisions. The feeling of being loved is the story of those rational decisions taken by a distracted mind to make things alright.
