C++ 11 has a thread class that represents an execution thread, promises and futures, which are objects that are used for synchronization in a concurrent environment, the async() function template for launching concurrent tasks, and the thread_local storage type for declaring thread-unique data.

The Biggest Changes in C++ 11 (and Why You Should Care)

C++ 11 provides solutions to all of these problems. C++ 11 allows constructors to call other peer constructors (termed delegation). This allows constructors to utilize another constructor's behavior with a minimum of added code. Delegation has been used in other languages e.g., Java and Objective-C. This syntax is as follows:

C++ 11 - Wikipedia

C++ 11 is the modern C++ standard published in 2011. This brought many major extensions and improvements to the existing language. It was approved by International Organization for Standardization (ISO) on 12 August 2011 and replaced C++03.

C++ 11 Overview - Tutorialspoint

C is a general-purpose, high-level language that was originally developed by Dennis M. Ritchie to develop the UNIX operating system at Bell Labs. C was originally first implemented on the DEC PDP-11 computer in 1972. In 1978, Brian Kernighan and Dennis Ritchie produced the first publicly available description of C, now known as the K&R standard.

Now C++ 11 makes these capabilities directly available to you, without your having to write a regular-expression engine yourself. Regular expressions are of practical value in many programs, as they can aid with the task of lexical analysis—intelligently breaking up pieces of an input string—as well as tasks such as converting from one text-file format (such as HTML) to another.

C++ 11 is the ISO C++ standard formally ratified by a 21-0 national vote in August 2011. This public working paper is the January 2012 working draft, and contains the C++ 11 standard plus minor editorial changes. C++ 11 is a major upgrade over C++ 98/03, with performance and convenience features that make it feel like a new language.

In C++ 11 working with threads is more simplified, here's from Folly source code the new standard way to defines a new thread: 15- Unordered containers. An unordered container is a kind of hash table. C++ 11 offers four standard ones: unordered_map; unordered_set; unordered_multimap; unordered_multiset; Folly uses in many places these new containers
