The Art of Light on Stage is the first history of theatre lighting design to bring the story right up to date. In this extraordinary volume, award-winning designer Yaron Abulafia explores the poetics of light, charting the evolution of lighting design against the background of contemporary performance. The book looks at the material and the conceptual; the technological and the transcendental. Never before has theatre design been so vividly and excitingly illuminated. The book examines the evolution of lighting design in contemporary theatre through an exploration of two fundamental issues: 1. What gave rise to the new directions in lighting design in contemporary theatre? 2. How can these new directions be viewed within the context of lighting design history? The study then focuses on the phenomenological and semiotic aspects of the medium for light – the role of light as a performer, as the medium of visual perception and as a stimulus for imaginative representations – in selected contemporary theatre productions by Robert Wilson, Romeo Castellucci, Heiner Goebbels, Jossi Wieler and David Zinder. This ground-breaking book will be required reading for anyone concerned with the future of performance.

With over four hundred illustrations and nearly sixty colour photographs, as well as interviews with many well-known professionals, Stage Lighting Design is a comprehensive, insightful and inspiring book that every designer and would-be designer should own.It is arranged in four sections:Design: the basic principles, illustrated with reference to specific productionsHistory: a brief survey of the historical development of stage lightingThe Life: interviews with 14 other lighting designers, plus notes on Pilbrow's own careerMechanics: a comprehensive section dealing with all the technical data today's designer will need.

Based on a series of interviews with some of the UK's leading theatre lighting designers, this book provides an insight into the creative process of lighting the stage. How do lighting designers decide what is the 'right light' for each moment of a production? What informs their choices? How do these decisions differ from opera to dance to drama?

This book looks at various important events relating to the poetics of light in theatre production in the West in the twentieth century, from the great reformists at the beginning of the century to contemporary artists such as Josef Svoboda, Alwin Nikolais and Robert Wilson. The intention isn't to outline a somewhat comprehensive history of stage lighting, instead it is an attempt to identify some basic issues concerning its use. Lighting issues are unshackled from the limited contexts of technique and image, where they often end up only to be relegated, and examined in the context of the performance's space/time structure, poetic and dramatic construction, and the relationship with the performer. A section dedicated to the theatrical work of the author outlines the distinctive point of view behind the book, regarding the creative processes and the operational relationship with technique. The title Active Light is a direct reference to Adolphe Appia who, at the end of the nineteenth century, was one of the first to deal with the issue of light explicitly as an artistic issue in theatre, with his own writings and creations. As far as Appia was concerned lumiere active was expressive light, creating shapes, forming poetic matter and dramatic substance."

Revised, updated and expanded, this classic primer on theatrical lighting design features the latest technological advances as well as photos and diagrams from the author's newest productions.A virtuoso in the field, Max Keller has set new standards of technical and artistic excellence. In this book he divulges his extensive knowledge of every aspect of stage lighting, from natural phenomena and the history of light in the theater, to Goethe and Runge's theories of color, to the fundamentals of optics and projection. This revised edition of Light Fantastic includes new images from Keller's most recent productions as well as completely updated information on optics, lamps, lanterns, projection and lighting consoles. In more than 600 stunning photographs and illustrations, the power of Keller's expertise shines through, making this a visually exciting and highly informative work for those involved in theater technology.Max Keller is an internationally acclaimed designer and consultant for productions on some of the world's most celebrated stages, including the Metropolitan Opera House, the Royal Opera House, the Salzburg Festival and The Munchner Kammerspiele.

Automated Lighting: The Art and Science of Moving and Color-Changing Lights, Third Edition (formerly Automated Lighting: The Art and Science of Moving Light) continues to be the most trusted text for working and aspiring lighting professionals. Now in its third edition, it has been fully updated to reflect the vast changes in stage and studio luminaires—including LEDs, switch-mode power supplies, optics, networking, Ethernet-based protocols like Art-Net and sACN, wireless DMX, and much more. Its written in clear, easy-to-understand language and includes enough detailed information to benefit for the most experienced technicians, programmers, and designers. Additional content and resources are provided at the author's website www.automatedlighting.pro.

First Published in 2010. Routledge is an imprint of Taylor & Francis, an informa company.
