The human circulatory system functions to transport blood and oxygen from the lungs to the various tissues of the body. The heart pumps the blood throughout the body. The lymphatic system is an extension of the human circulatory system that includes cell-mediated and antibody-mediated immune systems. The components of the human circulatory system include the heart, blood, red and white blood cells, platelets, and the lymphatic system.

Human Circulatory System
hollow tube that carries blood to and from body tissue. Blood. transports oxygen, nutrients, carbon dioxide and other materials. open circulatory system. blood flows freely within the body cavity and makes direct contact to organs and tissues. ex. insects, crustaceans.

Circulatory System Study Notes Flashcards | Quizlet
The human circulatory system circulates blood through two loops (double circulation) - One for oxygenated blood, another for deoxygenated blood. The human heart consists of four chambers - two ventricles and two auricles. The human circulatory system possesses a body-wide network of blood vessels. These comprise arteries, veins, and capillaries.

Human Circulatory System - Organs, Diagram and Its Functions
Circulatory system is concerned with the circulation of body fluids to distribute various substances to various body parts. The circulatory system is also known as the cardiovascular system. • It is an organ system that allows blood to circulate and transport nutrients (such as electrolytes and amino acids), oxygen, carbon dioxide, hormones, and blood cells.
