This book contains nine classic papers from the Offshore Technology Conference (OTC), which is the world's leading event for the development of offshore resources in the fields of drilling, exploration, production, and environmental protection. These papers provide innovation in, vision for, and lasting impact on design, construction or installation of offshore infrastructure, and have influence far beyond the offshore industry, some becoming integral to the design process of onshore structures such as buildings and bridges. The ASCE OTC Committee have chosen these classic documents to represent the outstanding papers from the early years of the OTC that withstand test of time. They contain engineering methods that have proven their value through widespread use, permeating codes, standards, guidelines and engineering software. Topics include: wave force evaluation; ultimate strength and reverse capacity; tubular joint material and design; pile foundations; and pipeline installation.

• Strictly as per the new term wise syllabus for Board Examinations to be held in the academic session 2021-22 for classes 11 & 12 • Multiple Choice Questions based on new typologies introduced by the board- I.
