Despite the fact that the case-law of the European Court of Justice on employment related issues has become increasingly erratic of late,there is no denying the centrality of the Court's role in the development of EC employment law. Though concentration on the work of the Court of Justice may no longer be in vogue, this book examines its contribution in the employment law field in its political and economic context, as well as with reference to the juridical structures within which the Community's judicial arm is obliged to operate. The objective is not simply to critique the employment jurisprudence of the Court but also to examine the procedural, operational and structural context in which the Court of Justice is obliged to work and to reflect on how this context may affect the jurisprudential outcome. The book focuses, in particular, on the shortcomings of the preliminary reference procedure. When the Court of Justice hands down decisions in the employment law field, Article 234 EC dictates a particular type of judicial dialogue between it and the national referring courts. It is contended that the dual dispute resolution/public interest nature of the Court's role in the preliminary reference procedure goes some way to explaining why its answers are often regarded as unsatisfactory from the perspective of the referring court and " users " of EC law generally. The book further outlines the developing Community policy on employment and reflects on the effect which this nascent policy may have on the balancing exercises which the Court is inevitably called upon to perform in a variety of social policy contexts. Finally, part two of the book examines specific substantive areas of EC employment law. The policy considerations at play in the case-law of the Court are discussed in detail, as is the coherence of this case-law with the Community's political stance on employment.

The reader gets unique insight into how a modern chief executive manages his enterprise. Read about Niels B. Christiansen ' s strategy considerations, about his procedures and tools and what other leaders and enterprises can learn from Danfoss. A mere two weeks before the financial crisis broke out in 2008, Niels B. Christiansen was appointed top executive of Danfoss with a staff of 23,000 employees. The crisis hit the enterprise hard, requiring the layoff of several thousands of employees. In spite of the crisis, Danfoss has succeeded in establishing a new, long-term strategy, which has attracted international attention, and Danfoss has since achieved more value creation than its competitors, such as the juggernauts German Siemens, American Emerson Electric and Swedish-Swizz ABB. Here is the book that tells the story.

Challenged by the recent economic crisis, the building and construction industry is currently seeking new orientation and strategies. Here mass customisation is uncovered as a key strategy in helping to meet this challenge. The term mass customisation denotes an offering that meets the demands of each individual customer, whilst still being produced with mass production efficiency. Today mass customisation is emerging from a pilot stage into a scalable and sustainable strategy... The first dedicated publication of its kind, this book provides a forum for the concept within an applied and highly innovative context. The book includes contributions from some of the most prominent thinkers and practitioners in the field from across the world, including Kasper S. Vibæk, Steve Kendall, Martin Bechthold, Mitchell M. Tseng, and Masa Noguchi. Bringing together this panel of experts who have carried out research both in academia and practice, this book provides an overview of state-of-the-art practice related to the concept of customisation and personalisation within the built environment.

Market-Oriented Product Innovation differs from most other titles, written either from a marketing or technical perspective, by giving a holistic view of the product innovation process. It has a product perspective, written from a managerial point of view, recognizing that product innovation, or new product development, is a discipline of its own. It is concerned with managing the products (goods and services) through their life cycle, integrating marketing knowledge and technological expertise, with the aim of getting satisfied customers. The book also gives a thorough treatment of the human and cultural aspects of product innovation by focusing on the change processes needed for the development of a market-oriented culture.

A haunting examination of groupthink and mass hysteria in a rural community The place is Salem, Massachusetts, in 1692, an enclave of rigid piety huddled on the edge of a wilderness. Its inhabitants believe unquestioningly in their own sanctity. But in Arthur Miller's edgy masterpiece, that very belief will have poisonous consequences when a vengeful teenager accuses a rival of witchcraft—and then when those accusations multiply to consume the entire village. First produced in 1953, at a time when America was convulsed by a new epidemic of witch-hunting, The Crucible brilliantly explores the threshold between individual guilt and mass hysteria, personal spite and collective evil. It is a play that is not only relentlessly suspenseful and vastly moving but that compels readers to fathom their hearts and consciences in ways that only the greatest theater ever can. "A drama of emotional power and impact" —New York Post
