was asked to identify essential elements for supporting high performance and provision of high quality early intervention Part C services as determined by the Annual Performance Review (APR) required under Individuals with Disabilities Education Act (IDEA). To respond, NECTAC interviewed one state and conducted a focus group with four other states that have consistently met requirements on the APR indicators and are maintaining effective, efficient practices. Additionally, the NECTAC review of states' APR early childhood indicators and technical assistance experience also helped inform the identification of commonalities across states that could be considered essential elements of a high performing Part C system. Four essential elements emerged from the discussion with the selected states: (1) Reliable and Current Data for Decision Making; (2) Monitoring and Accountability; (3) Adequate Numbers of Qualified Personnel; and (4) Strong Leadership, Administrative Support, and Partnerships between State and Local Levels. Each element is listed in this report and illustrated with specific activities and procedures noted by states. Quotes from participating states are included to provide examples of comments related to the various elements and to further describe how states are implementing these essential elements.

This practical guide is essential reading for families of infants and toddlers with, or at risk for, developmental delays or disabilities and the early intervention professionals who partner with those families. The Early Intervention Guidebook shows what early intervention looks like when it is based on current research, policies, and best practices. It focuses on how families and professionals can collaborate effectively so that young children learn, grow, and thrive. Chapters address important issues in early intervention, including child learning and development, family functioning and priorities, early intervention as a support not a substitute, and thinking about "what's next" after early intervention. Specific components of early intervention - evaluation and assessment, program planning, intervention implementation, service coordination, and transition - are discussed. This hands-on resource: describes the fundamental elements of early intervention for children, families, and professionals who participate in early intervention; uses stories of families in early intervention to illustrate key concepts; provides checklists that readers can use to assess their experience in early intervention; and includes national resources for families and disciplinary professionals.

How we raise young children is one of today's most highly personalized and sharply politicized issues, in part because each of us can claim some level of "expertise." The debate has intensified as discoveries about our development-in the womb and in the first

months and years-have reached the popular media. How can we use our burgeoning knowledge to assure the well-being of all young children, for their own sake as well as for the sake of our nation? Drawing from new findings, this book presents important conclusions about nature-versus-nurture, the impact of being born into a working family, the effect of politics on programs for children, the costs and benefits of intervention, and other issues. The committee issues a series of challenges to decision makers regarding the quality of child care, issues of racial and ethnic diversity, the integration of children's cognitive and emotional development, and more. Authoritative yet accessible, *From Neurons to Neighborhoods* presents the evidence about "brain wiring" and how kids learn to speak, think, and regulate their behavior. It examines the effect of the climate-family, child care, community-within which the child grows.

Our knowledge of the cognitive and social-emotional functioning of developmentally disabled infants and preschoolers derives, in large part, from our assessment of such children. This book has been developed to familiarize readers with the characteristics of developmentally disabled children, and to introduce to readers aspects of measurement that are of relevance to the assessment of atypical infants and preschoolers. The book has been developed with clinicians and prospective clinicians in mind. These are individuals who are committed to the care and education of developmentally disabled infants and preschoolers and the families of those children. The book has thus been written to provide support for the use of assessment data in planning early intervention programs. Of special note in the development of this edited book is that it is divided into four major parts with interrelated chapters in each part. The authors of chapters in Parts II and III had access to the chapters in Part I before writing their chapters. The summary chapters found in Part IV were similarly written by authors having access to all chapters in Parts I-III. This approach to the development of an edited book was chosen as a way of ensuring an integration of major concepts throughout the book. This

process is also a reflection of our belief that assessment is an interdisciplinary process, involving the synthesis of a number of diverse interests.

"The early recognition and treatment of psychiatric disorders constitutes secondary prevention: to date, the best evidence and best practice has been in EI for psychosis in young people. This new title will inform interventions in people from all age groups, building on the core components of excellent services: holistic, more engaging, low impact, culture- and age-sensitive practices, robust crisis interventions, assertive case management, flexible home visiting, family consulting, and in- and out-of-hours active response services. EI Teams have a low threshold to identify cases, reduce stigma in patients and their local community, engage users and carers in services even if treatment is not indicated or not available, and vigorously treat the first signs of the disorder in the first three years ("the critical period"). In managing a complex mix of possible noncases and cases, medication is only one option and part of phase-specific psychosocial interventions: education, family work, cognitive behavioural therapy, assertive community treatment, substance misuse and vocational interventions, amongst others"--Provided by publisher.
