well-known inequalities:  $a + b > c, a + c > b, b + c > a$ . But also useful and frequent substitutions are:  $a = x + y, b = y + z, c = z + x$ , where  $x, y, z > 0$ . (3.1) The question is whether there are always positive real numbers  $x, y, z$ , such that the above identities (3.1) hold and  $a, b, c$  are the sides of the triangle. The answer is positive.
