He sees networking as a major social and life skill that can benefit both our working and personal life. The Networking Pocketbook details the four basic steps that lead to effective networking relationships, the so-called LINK: Learning (about needs, ours and other people's) Investing (making strong contacts) Nurturing (achieving a deeper relationship) Keeping (maintaining the momentum) As the author leads readers through these four basic steps he progressively describes the seven key competencies needed for effective networking. These competencies relate to temperament/disposition, strategic planning, organisation, nurturing, communications, socialising and persistence.

Advanced Computing, Networking and Informatics are three distinct and mutually exclusive disciplines of knowledge with no apparent sharing/overlap among them. However, their convergence is observed in many real world applications, including cyber-security, internet banking, healthcare, sensor networks, cognitive radio, pervasive computing amidst many others. This two volume proceedings explore the combined use of Advanced Computing and Informatics in the next generation wireless networks and security, signal and image processing, ontology and human-computer interfaces (HCI).
