"A deeply curious and evenhanded report on our national appetites." --The New York Times In the tradition of *Fast Food Nation* and *The Omnivore's Dilemma*, an extraordinary investigation into the human lives at the heart of the American grocery store The miracle of the supermarket has never been more apparent. Like the doctors and nurses who care for the sick, suddenly the men and women who stock our shelves and operate our warehouses are understood as 'essential' workers, providing a quality of life we all too easily take for granted. But the sad truth is that the grocery industry has been failing these workers for decades. In this page-turning expose, author Benjamin Lorr pulls back the curtain on the highly secretive grocery industry. Combining deep sourcing, immersive reporting, and sharp, often laugh-out-loud prose, Lorr leads a wild investigation, asking what does it take to run a supermarket? How does our food get on the shelves? And who suffers for our increasing demands for convenience and efficiency? In this journey: □ We learn the secrets of Trader Joe's success from Trader Joe himself □ Drive with truckers caught in a job they call "sharecropping on wheels" □ Break into industrial farms with activists to learn what it takes for a product to earn certification labels like "fair trade" and "free range" □ Follow entrepreneurs as they fight for shelf space, learning essential tips, tricks, and traps for any new food business □ Journey with migrants to examine shocking forced labor practices through their eyes The product of five years of research and hundreds of interviews across every level of the business, *The Secret Life of Groceries* is essential reading for those who want to understand our food system--delivering powerful social commentary on the inherently American quest for more and compassionate insight into the lives that provide it.

A TIME 'New Books You Should Read' A People magazine 'Book of the Week' A New York Times Editors' Choice With a foreword by Elizabeth Strout 'Electric: with wit, with rage, with grief, with the kind of prose that makes you both laugh and thrill to the darker, spikier emotions just barely visible under the bright surface. What a wonderful collection of stories' Lauren Groff Another day! And then another and another and another. It seemed as if it would all go on forever in that exquisitely boring and beautiful way. But of course it wouldn't; everyone knows that. In this collection, Hilma Wolitzer invites us inside the private world of domestic bliss, seen mostly through the lens of Paulie and Howard's gloriously ordinary marriage. From hasty weddings to meddling neighbours, ex-wives who just won't leave, to sleepless nights spent worrying about unanswered chainmail, Wolitzer captures the tensions, contradictions and unexpected detours of daily life with wit, candour and an acutely observant eye. Including stories first published in magazines in the 1960s and 1970s alongside new writing from Wolitzer, now in her nineties Today a Woman Went Mad in the Supermarket reintroduces a beloved writer to be embraced by a new generation of readers. 'A fascinating time capsule of womanhood, marriage and motherhood over the last century ... A fabulous book' Emma Straub 'Immensely gratifying, poignant, funny ... Breathtaking' Elizabeth Strout, from the foreword

In this paradigm-shattering book, leading behavioural economist and food psychologist Brian Wansink - dubbed the 'Sherlock Holmes of food' and the 'wizard of why' - offers a radical new philosophy for weight loss. The answer isn't to tell people what to do: it's to set up their living environments so that they will naturally lose weight. Using cutting-edge, never-before-seen research from his acclaimed Food and Brand Lab at Cornell University, Wansink reveals how innovative and inexpensive design changes - from home kitchens to restaurants, from grocery stores to schools and workplaces - can make it mindlessly easy for people to eat healthier and make it more profitable for the companies who sell the food. In *Slim by Design*, Wansink argues that the easiest, quickest and most natural way to reverse weight gain is to work with human nature, not against it. He demonstrates how schools can nudge kids to take an apple instead of a cookie, how restaurants can increase profits by selling half-size portions, how supermarkets can double the amount of fruits and vegetables they sell, and how anyone can cut plate refills at home by more than a third. Interweaving drawings, charts, floor plans and scorecards with new scientific studies and compelling insights that will make you view your surroundings in an entirely fresh way, this entertaining, eye-opening book offers practical solutions for changing your everyday environment to make you, your family and even your community slim by design.

Whether you're designing consumer electronics, medical devices, enterprise Web apps, or new ways to check out at the supermarket, today's digitally-enabled products and services provide both great opportunities to deliver compelling user experiences and great risks of driving your customers crazy with complicated, confusing technology. Designing successful products and services in the digital age requires a multi-disciplinary team with expertise in interaction design, visual design, industrial design, and other disciplines. It also takes the ability to come up with the big ideas that make a desirable product or service, as well as the skill and perseverance to execute on the thousand small ideas that get your design into the hands of users. It requires expertise in project management, user research, and consensus-building. This comprehensive, full-color volume addresses all of these and more with detailed how-to information, real-life examples, and exercises. Topics include assembling a design team, planning and conducting user research, analyzing your data and turning it into personas, using scenarios to drive requirements definition and design, collaborating in design meetings, evaluating and iterating your design, and documenting finished design in a way that works for engineers and stakeholders alike.
