In this guide, you will learn about the Nissan crankshaft position sensor, referred to as a crank sensor or CKP. It is often confused with the camshaft position sensor, which can also fail and cause engine start problems. Symptoms The most common symptom of a failed crankshaft position sensor on a Nissan is that the car hesitates to start, or the car stalls after it starts.

Crankshaft Sensor Location
position sensor is an electronic device used in an engine to record the rate at which the crankshaft is spinning. This information is used by the Electronic Control Module() to control ignition and fuel injection. The sensor system consists of a rotating part, typically a disc, as well as a static part, the actual ...

Nissan/Datsun Altima Crankshaft Position Sensor - Best ...

The crankshaft position sensor on your Nissan Altima monitors the position of the crankshaft and the RPM of the engine. This information is then sent to the engine computer to help set ignition and fuel injector timing. The computer also uses data that is sent from the camshaft position sensor and other sensors on the engine.

Detailed Notes: Due to the numerous previous supersessions of older versions of this sensor, the replacement sensor may look slightly different from the sensor on the vehicle, and the installation orientation and connector may be in a somewhat different clock position. Nissan service info recommends replacing both cam and crank sensors at the same time to reduce comebacks.
