Identify particles in transmutation equations, complete reactions to obey the conservation of mass and nuclear charge. Information A half-life ($t_{1/2}$) is the time required for one-half of the nuclei of a radioisotope sample to decay to products. After each half-life, half of the existing radioactive atoms (parent element) have decayed into atoms of a new element (daughter element). Equation $N = N_0(0.693)^{-t/t_{1/2}}$?

This page is an activity meant to be worked through as a small group of ideally 4 people. Introduction to nuclear chemistry with a discussion of the four fundamental forces of physics (gravity, electro-magnetism, strong nuclear force, and weak nuclear force. The text covers the forces at work in an atomic nucleus and how they can lead to a balanced or unbalanced situation.
