Worksheet #1. Calculations must be done from left to right. Calculations in brackets (parenthesis) are done first. When you have more than one set of brackets, do the inner brackets first. Exponents (or radicals) must be done next. Multiply and divide in the order the operations occur. Add and ...

[Math Worksheets: Order of Operations or PEMDAS](#)

PEMDAS is a mnemonic for Parentheses, Exponents, Multiplication, Division, Addition and Subtraction. This is the order in which operations are applied to solve more complex math problems that have multiple terms and multiple operations. Knowing how to solve order of operations problems is a critical prerequisite for algebra, and using PEMDAS as your mental cue to get the order of operations in math problems in general down first will make solving those equations a lot less confusing.

M ultiplication and D ivision (left-to-right) AS. A ddition and S ubtraction (left-to-right) Divide and Multiply rank equally (and go left to right). Add and Subtract rank equally (and go left to right) So do it this way: After you have done "P" and "E", just go from left to right doing any "M" or "D" as you find them.

The new order of operations, including operations with exponents, is: Step 1. Carry out the operations within the parentheses (or absolute value). Step 2. Evaluate powers and roots. Step 3. Multiply and divide (it does not matter which comes first)--this includes applying a minus sign. Step 4.

Mixing up the correct order of the operations can lead to wrong answers. This means that anything within brackets (parentheses) will go first. Exponents (or square roots) go before the 4 basic operations and multiplication and division go before addition and subtraction. Division and multiplication rank equally and so do addition and multiplication.
