Mental Health & Stigma | Psychology Today

Perception can be considered as processed sensation. In other words, it is the meaning we give to sensory input, based on current context, past (learned) experiences, current emotional state etc. Abnormal perceptual experiences form part of the clinical picture of many mental disorders. Equally, the range of normal perceptual experience is very wide.

Mental State Examination 3 – Perception and Mood

In Asia, where many cultures value “conformity to norms, emotional self-control, [and] family recognition through achievement”, mental illnesses are often stigmatized and seen as a source of shame. However, the stigmatization of mental illness can be influenced by other factors, such as the perceived cause of the illness. In a 2003 study, Chinese Americans and European Americans were presented with a vignette in which an individual was diagnosed with schizophrenia or a major depressive ...

Cultural Perspectives on Mental Health

Aims: Using a comparative approach, this study attempted to compare the mental health literacy and stigmatising attitudes of Taiwanese Chinese with those found among Australian and Japanese participants in other studies and to explore how mental health literacy and stigmatising attitudes relate to different perceptions of causes of mental illness.
