Integrating recent research and developments in the field, this revised second edition introduces an easy-to-master strategy for developing and writing culturally sensitive case conceptualizations and treatment plans. Concrete guidelines and updated case material are provided for developing conceptualizations for the five most common therapy models: Cognitive-Behavioral Therapy (CBT), Psychodynamic, Biopsychosocial, Adlerian, and Acceptance and Commitment Therapy. The chapters also include specific exercises and activities for mastering case conceptualization and related competencies and skills. Also new to this edition is a chapter on couple and family case conceptualizations, and an emphasis throughout on trauma. Practitioners, as well as graduate students in counseling and in clinical psychology, will gain the essential skills and knowledge they need to master case conceptualizations.

Strongly focused on the therapist-client relationship, INTERPERSONAL PROCESS IN THERAPY: AN INTEGRATIVE MODEL integrates cognitive-behavioral, family systems, and psychodynamic theories. Newly revised and edited, this highly engaging and readable text features an increased emphasis on the integrative approach to counseling, in which the counselor brings together the interpersonal/relational elements from various theoretical approaches, and provides clear guidelines for using the therapeutic relationship to effect change. The author helps alleviate beginning therapists' concerns about making mistakes, teaches therapists how to work with their own countertransference issues, and empowers new therapists to be themselves in their counseling relationships. Featuring new case examples and dialogues, updated references and research, clinical vignettes, and sample therapist-client dialogues, this contemporary text helps bring the reader in the room with the therapist, and illustrates the interpersonal process in a clinically authentic and compelling manner. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Presenting an innovative framework for tailoring cognitive-behavioral interventions to each client's needs, this accessible book is packed with practical pointers and sample dialogues. Step by step, the authors show how to collaborate with clients to develop and test conceptualizations that illuminate personal strengths as well as problems, and that deepen in explanatory power as treatment progresses. An extended case illustration demonstrates the three-stage conceptualization process over the entire course of therapy with a multiproblem client. The approach emphasizes building resilience and coping while decreasing psychological distress. Special features include self-assessment checklists and learning exercises to help therapists build their conceptualization skills.

Acceptance and commitment therapy (ACT) is more than just a set of techniques for structuring psychotherapeutic treatment; it also offers a new, insightful, transdiagnostic approach to case conceptualization and to mental health in general. Learn to put this popular new psychotherapeutic model to work in your practice with this book, the first guide that explains how to do case conceptualization within an ACT framework. ACT in Practice offers an introduction to ACT, an overview of its impact, and a brief introduction to the six core processes of ACT treatment—the six points of the hexaflex model and its pathological alter ego, the so-called inflexible. It describes how to accomplish case conceptualizations in general and offers précis of the literature that establish the importance and value of case conceptualization. This guide also offers possible alternative case conceptualization for cases from different therapeutic traditions, a great help to therapists who come from a more traditional CBT background. Exercises throughout help you to evaluate the information you have just learned so that you may effectively integrate ACT into your practice.

Clinical supervision (CS) is emerging as the crucible in which counselors acquire knowledge and skills for the substance abuse (SA) treatment profession, providing a bridge between the classroom and the clinic. Supervision is necessary in the SA treatment field to improve client care, develop the professionalism of clinical personnel, and maintain ethical standards. Contents of this report: (1) CS and Prof]. Develop. of the SA Counselor: Basic info. about CS in the SA treatment field; Presents the ,how to, of CS.; (2) An Implementation Guide for Admin.; Will help admin. understand the benefits and rationale behind providing CS for their program's SA counselors. Provides tools for making the tasks assoc. with implementing a CS system easier. Illustrations.

A major contribution for all clinicians committed to understanding and using what really works in therapy, this book belongs on the desks of practitioners, students, and residents in clinical psychology, psychiatry, counseling, and social work. It will serve as a text in graduate-level courses on cognitive-behavior therapy and in clinical practice.

Completely revised and updated, the fifth edition of Practicum and Internship is an eminently practical resource that provides students and supervisors with thorough coverage of the theoretical and practical aspects of the practicum and internship process. New in this edition are: an accompanying website with downloadable, customizable forms, contracts, and vitae thoughtful discussion of the DSM-5 and HIPAA guidelines and the most recent CACREP standards expanded analysis of the use of technology and social media in counseling expanded discussions of ethical-decision making and ethical guidelines for informed consent and for supervision contracts in individual settings new and updated materials on case conceptualization, assessment, goal setting and treatment planning new materials reviewing third-wave counseling theories and practices, including MBSR, MBCT, ACT, and DBT detailed presentation of a skill-based model for counseling training and self-assessment questionnaires and guided-reflection exercises for application and orientation to the model.

Many training programmes assume that if students receive separate courses in research design, assessment, and counselling, they will naturally integrate this information into their work with clients. Unfortunately this mode of science-practice integration often fails. Bridging Case Conceptualization, Assessment, and Intervention presents a new approach to the integration of science and practice in clinical work. Author Scott T Meier systematically connects case conceptualization, assessment, and analysis of intervention effects. This integrative approach differs from traditional methods of teaching counselling in its emphasis on the inclusion of assessment data in the intervention process. This innovative, transtheoretical volume examines · Key elements of conceptualization, assessment, and analysis · The role of structured feedback in the clinical process · Outcome elements for multiple and selected problems · Assessment methods and psychometric principles · Graphical, qualitative, and quantitative analytic techniques · Numerous case studies · Possible future directions for science-practice efforts. Bridging Case Conceptualization, Assessment, and Intervention provides an effective method for thinking about, organizing, and focusing on the key elements of counselling processes and outcomes. By integrating case conceptualization and assessment data into intervention decisions, students and clinicians will understand when and why counselling is ineffective and have a basis for adjusting treatment to improve clinical outcomes. With its emphasis on concepts and procedure, Bridging Case Conceptualization, Assessment, and Intervention is intended as a manual for students in psychology, psychiatry, social work, or counselling and practising psychotherapists, psychiatrists, or counsellors.

Presenting an innovative framework for tailoring cognitive-behavioral interventions to each client's needs, this accessible book is packed with practical pointers and sample dialogues. Step by step, the authors show how to collaborate with clients to develop and test conceptualizations that illuminate personal strengths as well as problems, and that deepen in explanatory power as treatment progresses. An extended case illustration demonstrates the three-stage conceptualization process over the entire course of therapy with a multiproblem client. The approach emphasizes building resilience and coping while decreasing psychological distress. Special features include self-assessment checklists and learning exercises to help therapists build their conceptualization skills.

Case conceptualization and treatment planning skills have always been important in providing quality care to clients. These skills are even more vital in today's managed care market for documenting clients' need for treatment and support interventions on brief, intermediate or long-term bases. This book enables readers to design case conceptualizations and treatment plans from diverse theoretical perspectives, including: behavioural; cognitive; process/experiential; family systems; dynamic; and transtheoretical. The author also demonstrates how readers can integrate important domains of human complexity into their clinical work, so that treatment can be tailored to a particular client. These domains include development, se
