In his book of 1958: The Council of Seven Lights, George van Tassel produced a compilation of communications describing a reality that many of us are not familiar with. Much of the information is complex and was not easily understood. The subject matters include the cycling of twelve densities, the progressed evolution of planets, and the connection between gravity and electricity. He takes the reader far beyond our atmosphere to give technical data on the lines of energy, the conditions of space. He describes polarity, its positive and negative aspects, and applies theory to fact so the reader can understand every point he makes. The beginning of all creation has the same meaning as the ending of all creation, for all

things have always existed and always will exist. Everything anyone has ever been or will ever be, he is now. This is a truth often overlooked in man's search for understanding. He forgets God was all there was, and therefore all there is now or will ever be. Van Tassel writes that religion and science are the same thing, the only difference being that they are two opposite viewpoints. Just as a wall is a wall regardless of which side one stands on, so are science and religion, life itself. According to Van Tassel, the Bible is an accurate history of events repeating themselves in cycles. He says there are predictions referring to spaceships throughout the Bible, among them the prophecy that there will be a day when the ships will come to take the people who are ready, leaving those who are not prepared to face the cataclysmic destruction inevitably approaching. This book explains the vortices of the human body that are responsible for the reasons that certain individuals affect one so strongly on meeting, a violent, a strong attraction without apparent cause, and also explain a person's effect on each others. In The Council of Seven Lights, the reader will find many absorbing facets of knowledge - new data on atmospheric conditions, further information about space ships, and for the searcher who desires more understanding of the greater pattern of life, a philosophy well worth studying. In the absence of substitutes, the use of blood components remains essential in therapy. This guide contains a compendium of measures designed to ensure the safety, efficacy and quality of blood components and is particularly intended for all those working in blood transfusion services. In accordance with the approach recommended by the Council of Europe in this field, it is based on the premise of voluntary, non-remunerated blood donation. It describes the different blood components and gives information on their clinical indications and possible side effects.
