Base Plate and Anchor Rod Design

This guide presents a unified approach to the design of structural steel members with web openings. The approach is based on strength criteria rather than allowable stresses, because at working loads, locally high stresses around web openings have little connection with a member's deflection or strength.

1.1 Objectives of the Design Guide

The primary objective of this Design Guide is to provide basic principles and simple analytical tools to evaluate steel framed floor systems and footbridges for vibration serviceability due to human activities. Both human comfort and the need to control movement for sensitive equipment are considered.
