Each surgical procedure is explained step by step and supported with high-resolution serial intra-operative photographs and line diagrams. While the majority of the text covers the surgical anatomy, classification, pathophysiology, and imaging techniques for hernias, a closing chapter on future directions introduces readers to the latest and emerging techniques and

As abdominal swelling decreases, the fascial edges are pulled closer together. The Wittmann patch is opened at least once every 24 to 36 hours for dressing changes, procedures, inspections, and reapproximations. When the two fascial edges are close enough, the remaining patch material is removed and the abdominal wall closed fascia-to-fascia.
