The Archaeology of Animal Bones.

Animal ecologists can observe the present and reconstruct the last one or two centuries from historical sources, but the study of animal bones adds valuable insight into the peoples and landscapes of the past while telling much about the evolution of human-animal relationships.

Terry O'connor (2004-01 ...

This handbook builds on the  
information provided in the Historic  
England guidelines for environmental  
archaeology (Campbell et al 2011) but  
focuses on bones and teeth, as these  
are by far the more commonly  
preserved animal remains in Britain.  
They occur primarily in disarticulated  
form, as part of the waste of daily life  
and industrial processes, or less

The Archaeology of Animal Bones (Texas A&M University ... Zoo-archaeology (or archaeo-zoology), also known as faunal analysis, is a branch of archaeology that studies remains of animals from archaeological sites. Faunal remains are the items left behind when an animal dies. These include bones, shells, hair, chitin, scales, hides, proteins and DNA.
