The Hydraulics of Stepped Chutes and Spillways
 Stepped channel designs have been used for more than 3,500 years. A significant number of dams were built with overflow stepped spillways during the nineteenth and early twentieth centuries, before the design technique became outdated with the progresses in hydraulic jump stilling basin design.

 The hydraulics of stepped chutes differs from the classical hydraulics of smooth channels and is not usually taught in schools. The books on classical hydraulics do not cover this topic either. The purpose of the book has been to provide basic hydraulic theory related to designing stepped chutes and spillways.

 Hydraulics of Roman Aqueducts: Steep Chutes, Cascades, and Dropshafts H. CHANSON Abstract This paper examines the archaeological evidence for steep chutes, cascades, and dropshafts in Roman aqueducts. It also presents comparative data on steep-descent water flow in aqueducts based on physical model tests. It is suggested that the Romans were

HYDRAULIC DESIGN OF STEPPED SPILLWAYS
 On stepped chutes the water falls from level to level and the optimal dissipation is expected if a hydraulic jump builds. For steeper stepped chutes and large discharges, so called skimming flow occurs in which the step acts as roughness element and causes a strong mixing of the water with air.

 her career at Reclamation working on hydraulic issues related to stepped spillway performance and design and was an internationally-known and respected researcher in this field. I came into the subject at the end of my career and have been most interested in air entrainment and possibility of cavitation damage on stepped chutes.

 Historical developments. Stepped spillways, consisting of weirs and channels, have been used for over 3,500 years since the first structures were built in Greece and Crete. During Antiquity, the stepped chute design was used for dam spillways, storm waterways, and in the town water supply channels. Most of these early structures were built around the Mediterranean Sea, and the expertise on stepped spillway design was spread successively by the Romans, Muslims and Spaniards.
